Module handbook of the master's program in

Electrical Communication Engineering

at the Dept. of Electrical Engineering/Computer Science

University of Kassel

Status: Winter Semester 2011/2012

Table of Contents

1 Course scheme samples

In the following, course scheme samples are listed which serve as examples for selecting modules with a certain overall focus. The foci include

- **Digital Communications**
- **Electromagnetics**
- **Hardware Components for Communication Systems**
- **Microwaves**
- **Mobile Internet**
- **Optoelectronics**
- **OSI Model**
- **Software Components for Communication Systems.**

The samples for a certain focus include **two versions of course schemes**, namely

- one **starting in the summer semester** and
- one **starting in the winter semester**.

Note that neither of these sample versions is mandatory in any way, but both versions rather represent reasonable choices recommended for the corresponding focus. Clearly, each student is free to select other combinations from the modules listed in Sect. 2 complying with the examination rules and corresponding to the individual knowledge in the different areas.

Each course scheme sample contains the corresponding recommended modules which are described in greater detail in Sect. 2. Note that unlike Sect. 2, Sect. 3 contains qualification modules which represent additional mandatory modules in case the examination board grants a conditional admission according to §4 par.(5) of the ECE examination regulation. See Sect. 3 for further details.

1.1 Digital Communications

Course scheme sample with focus on *Digital Communications*							
Start in *summer semester*							
semester	winter semester (WS)/ summer semester (SS)	Credits					
		6	12	18	24	30	
1	SS	Digital Communications R1a		Digital Communications R2a	Mobile Internet R1a	Social Communication NT1a	
2	WS	Digital Communications R3a		Digital Communications R4a	Digital Communications P1a	Mobile Internet R2a	
3	SS	Digital Communications T1a (Master's Thesis)					

Course scheme sample with focus on *Digital Communications*							
Start in *winter semester*							
semester	winter semester (WS)/ summer semester (SS)	Credits					
		6	12	18	24	30	
1	WS	Digital Communications R3a		Digital Communications R4a	Microwaves R3a	Social Communication NT1a	
2	SS	Digital Communications R1a		Digital Communications P1a	Digital Communications R2a	Mobile Internet R1a	
3	WS	Digital Communications T1a (Master's Thesis)					

1.2 Electromagnetics

Course scheme sample with focus on *Electromagnetics*						
Start in *summer semester*						
semester	winter semester (WS)/ summer semester (SS)	Credits				
		6	12	18	24	30
1	SS	Electromagnetics R1a		Microwaves R1a	Microwaves R2a	Social Communication NT1a
2	WS	Electromagnetics R2a		Electromagnetics R3a	Electromagnetics P1a	Microwaves R3a
3	SS	Electromagnetics T1a (Master's Thesis)				

Course scheme sample with focus on *Electromagnetics*						
Start in *winter semester*						
semester	winter semester (WS)/ summer semester (SS)	Credits				
		6	12	18	24	30
1	WS	Electromagnetics R2a		Electromagnetics R3a	Microwaves R3a	Social Communication NT1a
2	SS	Electromagnetics R1a		Electromagnetics P1a	Microwaves R1a	Microwaves R2a
3	WS	Electromagnetics T1a (Master's Thesis)				

1.3 Hardware Components for Communication Systems

Course scheme sample with focus on *Hardware Components for Communication Systems*						
Start in *summer semester*						
semester	winter semester (WS)/ summer semester (SS)	Credits				
		6	12	18	24	30
1	SS	Hardware Components for Communication Systems R1a	Hardware Components for Communication Systems R4a		Microwaves R1a	Social Communication NT1a
2	WS	Microwaves R3a	Hardware Components for Communication Systems R3a		Microwaves P1a *or* Optoelectronics P1a	Microwaves R4a
3	SS	Microwaves T1a *or* Optoelectronics T1a (Master's Thesis)				

Course scheme sample with focus on *Hardware Components for Communication Systems*						
Start in *winter semester*						
semester	winter semester (WS)/ summer semester (SS)	Credits				
		6	12	18	24	30
1	WS	Microwaves R3a	Hardware Components for Communication Systems R3a		Microwaves R4a	Social Communication NT1a
2	SS	Hardware Components for Communication Systems R1a	Hardware Components for Communication Systems R4a		Microwaves R1a	Microwaves P1a *or* Optoelectronics P1a
3	WS	Microwaves T1a *or* Optoelectronics T1a (Master's Thesis)				

1.4 Microwaves

Course scheme sample with focus on *Microwaves*						
Start in *summer semester*						
semester	winter semester (WS)/ summer semester (SS)	Credits				
		6	12	18	24	30
1	SS	Microwaves R1a	Microwaves R2a	Electromagnetics R1a		Social Communication NT1a
2	WS	Microwaves R3a	Microwaves R4a	Electromagnetics R2a		Microwaves P1a
3	SS	Microwaves T1a (Master's Thesis)				

Course scheme sample with focus on *Microwaves*						
Start in *winter semester*						
semester	winter semester (WS)/ summer semester (SS)	Credits				
		6	12	18	24	30
1	WS	Microwaves R3a	Microwaves R4a	Electromagnetics R2a		Social Communication NT1a
2	SS	Microwaves R1a	Microwaves R2a	Microwaves P1a	Electromagnetics R1a	
3	WS	Microwaves T1a (Master's Thesis)				

1.5 Mobile Internet

Course scheme sample with focus on *Mobile Internet*						
Start in *summer semester*						
semester	winter semester (WS)/ summer semester (SS)	Credits				
		6	12	18	24	30
1	SS	Mobile Internet R1a	Digital Communications R1a		Digital Communications R2a	Social Communication NT1a
2	WS	Mobile Internet R2a	Mobile Internet P1a	Digital Communications R3a		Digital Communications R4a
3	SS	Mobile Internet T1a (Master's Thesis)				

Course scheme sample with focus on *Mobile Internet*						
Start in *winter semester*						
semester	winter semester (WS)/ summer semester (SS)	Credits				
		6	12	18	24	30
1	WS	Digital Communications R3a		Digital Communications R4a	Microwaves R3a	Social Communication NT1a
2	SS	Mobile Internet R1a	Mobile Internet P1a	Digital Communications R1a		Digital Communications R2a
3	WS	Mobile Internet T1a (Master's Thesis)				

1.6 Optoelectronics

Course scheme sample with focus on *Optoelectronics*						
Start in *summer semester*						
semester	winter semester (WS)/ summer semester (SS)	Credits				
		6	12	18	24	30
1	SS	Optoelectronics R1a	Electromagnetics R1a		Hardware Components for Communication Systems R1a	Social Communication NT1a
2	WS	Optoelectronics R2a		Hardware Components for Communication Systems R3a		Optoelectronics P1a
3	SS	Optoelectronics T1a (Master's Thesis)				

Course scheme sample with focus on *Optoelectronics*						
Start in *winter semester*						
semester	winter semester (WS)/ summer semester (SS)	Credits				
		6	12	18	24	30
1	WS	Optoelectronics R2a		Hardware Components for Communication Systems R3a		Social Communication NT1a
2	SS	Electromagnetics R1a		Optoelectronics R1a	Optoelectronics P1a	Hardware Components for Communication Systems R1a
3	WS	Optoelectronics T1a (Master's Thesis)				

1.7 OSI Model

Course scheme sample with focus on *Different Layers of the OSI Model*						
Start in *summer semester*						
semester	winter semester (WS)/ summer semester (SS)	Credits				
		6	12	18	24	30
1	SS	Mobile Internet R1a	Microwaves R1a	Hardware Components for Communication Systems R1a	Optoelectronics R1a	Social Communication NT1a
2	WS	Digital Communications R4a	Electromagnetics R3a	DC P1a *or* EM P1a *or* MW P1a *or* MI P1a *or* OE P1a	Optoelectronics R2a	
3	SS	DC T1a *or* EM T1a *or* MW T1a *or* MI T1a *or* OE T1a (Master's Thesis)				

Course scheme sample with focus on *Different Layers of the OSI Model*						
Start in *winter semester*						
semester	winter semester (WS)/ summer semester (SS)	Credits				
		6	12	18	24	30
1	WS	Digital Communications R4a	Electromagnetics R3a	Optoelectronics R2a		Social Communication NT1a
2	SS	Mobile Internet R1a	Microwaves R1a	DC P1a *or* EM P1a *or* MW P1a *or* MI P1a *or* OE P1a	Optoelectronics R1a	Hardware Components for Communication Systems R1a
3	WS	DC T1a *or* EM T1a *or* MW T1a *or* MI T1a *or* OE T1a (Master's Thesis)				

1.8 Software Components for Communication Systems

Course scheme sample with focus on *Software Components for Communication Systems*						
Start in *summer semester*						
semester	winter semester (WS)/ summer semester (SS)	Credits				
		6	12	18	24	30
1	SS	Software Components for Communication Systems R1a		Digital Communications R2a	Hardware Components for Communication Systems R1a	Social Communication NT1a
2	WS	Software Components for Communication Systems R2a		Mobile Internet P1a *or* Digital Communications P1a	Digital Communications R3a	
3	SS	Digital Communications T1a *or* Mobile Internet T1a (Master's Thesis)				

Course scheme sample with focus on *Software Components for Communication Systems*						
Start in *winter semester*						
semester	winter semester (WS)/ summer semester (SS)	Credits				
		6	12	18	24	30
1	WS	Digital Communications R3a		Software Components for Communication Systems R2a		Social Communication NT1a
2	SS	Software Components for Communication Systems R1a		Mobile Internet P1a *or* Digital Communications P1a	Digital Communications R2a	Hardware Components for Communication Systems R1a
3	WS	Digital Communications T1a *or* Mobile Internet T1a (Master's Thesis)				

2 Modules of the ECE master's program

In this section, all modules which can be selected during the three semesters of the ECE master's program are listed. The modules cover the areas of

- Digital Communications
- Electromagnetics
- Hardware Components for Communication Systems
- Microwaves
- Mobile Internet
- Optoelectronics
- Software Components for Communication Systems.

Within each area, we have the following naming convention: The label of a module, for example *Digital Communications R1*, is made up by the three attributes <AREA TYPE NO>. While AREA and NO denote one of the aforementioned areas and a consecutive numbering, resp., TYPE takes one of the following values:

R **r**egular modules consisting of lectures, exercises, lab trainings and seminars
P **p**roject module
T **t**hesis module (master thesis)
NT **n**on-**t**echnichal module *Social Communication NT1*.

2.1 Digital Communications

<tr><td>Lecturer(s)</td><td colspan="5">Dahlhaus, Selig</td></tr>
<tr><td>Responsible(s)</td><td colspan="5">Dahlhaus</td></tr>
<tr><td>Required qualifications</td><td colspan="5">Knowledge of fundamentals in digital communications</td></tr>
<tr><td>Workload</td><td colspan="5">105 hours course attendance
255 hours self-study</td></tr>
<tr><td>Contents</td><td colspan="5">▪ Carrier and timing recovery, signalling in band-limited channels, transmission over linear band-limited channels, intersymbol interference, adaptive equalization, multicarrier transmission
▪ Medium access control in wireless communication systems.
▪ Introduction to MATLAB and its most important commands, simulation of a simple transmission chain, channel coding (convolutional codes), coding gain, channels with multipath propagation, channel models with fading and bit-error rate performance for binary signalling, transmission with orthogonal frequency-division multiplexing (OFDM), interleaving, implementation of an OFDM modem.</td></tr>
<tr><td>Literature</td><td colspan="5">▪ J.G. Proakis, Digital Communications, McGraw-Hill, 4th ed., ISBN 0-07-118183-0.
▪ Papoulis, S. U. Pillai, Probability, Random Variables, and Stochastic Processes, McGraw-Hill, 4th ed., ISBN 0071226613.
▪ Additional papers to be handed out according to seminar topics.</td></tr>
<tr><td>Media</td><td colspan="5">Beamer (presentation, seminar), black board (derivations, explanations), paper (exercises), PC based software development (lab training).</td></tr>
<tr><td>Objectives</td><td colspan="5">▪ Understanding receiver algorithms in the physical layer of real-world communication systems including aspects in the receiver design which characterize the trade-off
▪ Literature and internet based investigation on a topic from medium access control in wireless communication systems
▪ Introduction to scientific work in the field of medium access control in wireless transmission systems
▪ Presentation of a scientific topic in a seminar.
▪ Understanding approaches for numerical simulation of transceivers in the physical layer of communication systems.</td></tr>
<tr><td>Competences to be acquired</td><td colspan="5">▪ Research and development in the area of digital transmission systems, signal processing (e.g. transceivers, image processing), statistical inference (e.g. quality management) and simulation of communication systems (e.g. telecommunications)
▪ Design of terminals and base stations, in particular for wireless communications based on multicarrier transmission
▪ Operation and maintenance of devices in production processes.</td></tr>

Module title	**Electromagnetics R3a**				
Courses	**Title**	**Type**	**SWS**	**Credits**	**Performance requirements/ Examination**
	Numerical Methods in Electromagnetic Field Theory I (lec)	lecture	2	3	oral exam (30 minutes)
	Numerical Methods in Electromagnetic Field Theory I (ex)	exercises	1	1	
	Numerical Methods in Electromagnetic Field Theory I (lab)	lab training	2	2	lab training attendance and conductance of experiments
Module credits	6				
Language	English				
Held	in winter semester, annually				
Lecturer(s)	Witzigmann, Römer				
Responsible(s)	Witzigmann				
Required qualifications	▪ Mathematical foundations in electromagnetic field theory ▪ Basic knowledge of semiconductor materials				
Workload	75 hours course attendance 105 hours self-study				
Contents	▪ Semiconductor Transport: Boltzmann equation, drift-diffusion box method, boundary conditions ▪ Schrodinger equation: finite-difference method, eigen value problems, finite element method ▪ Continuum mechanics: basic equations, application to nanostructures, discretization				
Literature	▪ S. Selberherr, *Analysis and Simulation of Semiconductor Devices* ▪ J. Jin, *The Finite Element Method in Electromagnetics*				
Media	Beamer (presentation), black board (derivations, explanations), paper (exercises), PC based software development (exercises).				
Objectives	▪ Knowledge of discretization of the semiconductor transport equations, Schrödinger equation and continuum mechanics ▪ Application of commercial device simulators, independent programming of numerical problems				
Competences to be acquired	▪ Research and development in the area of analysis and numerical approaches for electromagnetics ▪ Interpretation and evaluation of numerical results.				

Module title	Electromagnetics P1a				
Courses	**Title**	**Type**	**SWS**	**Credits**	**Performance requirements/ Examination**
	Electromagnetics Project Work	project	4	6	Report and presentation
Module credits	6				
Language	English				
Held	in summer and winter semesters, topics on demand anytime				
Lecturer(s)	Witzigmann and team				
Responsible(s)	Witzigmann				
Required qualifications	Knowledge of fundamentals in electromagnetic field theory				
Workload	60 hours course attendance 120 hours self-study				
Contents	▪ Analysis of a problem (project task) in the area of field theory ▪ Structured approach to the solution.				
Literature	Scientific papers/books according to project topics.				
Media	PC based software development and/or hardware development (project work), beamer (presentation of results), report (electronic form and hard copy).				
Objectives	▪ Application of knowledge acquired in the area of field theory to a specific technical/scientific problem ▪ Solving a problem individually or in a team ▪ Writing of a report and presentation of results.				
Competences to be acquired	▪ Literature and internet based investigation ▪ Structured approach for solving a problem ▪ Independent scientific work ▪ Ability to work in a team and to exchange ideas ▪ Presentation in the framework of a project.				

Module title	Electromagnetics T1a				
Courses	**Title**	**Type**	**SWS**	**Credits**	**Performance requirements/ Examination**
	Electromagnetics Master Thesis	master thesis	20	30	Report and presentation
Module credits	30				
Language	English				
Held	in summer and winter semesters, topics on demand anytime				
Lecturer(s)	Witzigmann and team				
Responsible(s)	Witzigmann				
Required qualifications	▪ Knowledge of fundamentals in field theory ▪ Proof of fulfilled admission requirements for the Master thesis according to the ECE examination regulation				
Workload	300 hours course attendance 600 hours self-study				
Contents	▪ Theoretic and practical problems in the area of wave propagation ▪ Theoretic and practical inverse problems in the area of acoustic and electromagnetic fields ▪ Non-destructive testing and remote sensing.				
Literature	▪ Langenberg, *Skriptum Elektromagnetische Feldtheorie*, Kassel 2000 (in German) ▪ Marklein, *Numerische Modellierung von Wellenausbreitungsproblemen im Zeitbereich*, Dissertation, Kassel, 1998, (in German) ▪ Hollins C. Chen, *Theory of Electromagnetic Waves*, McGraw Hill 1983 ▪ Additional papers/references according to thesis topics.				
Media	PC based software development and/or hardware development, beamer (presentation of results), report (electronic form and hard copy).				
Objectives	▪ Independent scientific approach to solve a field theoretical problem and related topics ▪ Writing of a report and presentation of results in a colloquium.				
Competences to be acquired	▪ Literature and internet based investigation ▪ Independent scientific work ▪ Compilation of a report, preparation of a talk and presentation of scientific results.				

2.3 Hardware Components for Communication Systems

Module title	Hardware Components for Communication Systems R3a				
Courses	**Title**	**Type**	**SWS**	**Credits**	**Performance requirements/ Examination**
	Nanosensorics (lec)	lecture	2	3	oral exam (30 minutes)
	Nanosensorics (lab)	lab training	2	3	lab training attendance and conductance of experiments
	Principles of Optical Metrology (sem)	seminar	2	3	seminar attendance and presentation
	Optical Metrology (lab)	lab training	2	3	lab training attendance and conductance of experiments
Module credits	12				
Language	English				
Held	in winter semester, annually				
Lecturer(s)	Messow, Lehmann				
Responsible(s)	Hillmer, Lehmann				
Required qualifications	Knowledge in optics, material science and semiconductor devices (Optoelectronics Q1); signal processing and sensors, e.g. “Sensoren und Messsysteme” would be helpful				
Workload	120 hours course attendance 240 hours self-study				
Contents	▪ Repetition of light wave and ray optical principles ▪ Repetition of diffraction phenomena and Fourier optics ▪ Microscopic imaging and image processing techniques ▪ Confocal microscopy, Interferometry, white-light interferometer, integrated interferometers, interference microscopes ▪ Fiber-Bragg-Grating sensors, repetition of optical fibers ▪ Optical sensors and applied devices in optical sensors (including: microoptics, adaptive optics, diffractive optical elements) ▪ Principles and application of optical in-process measurement ▪ Thin-film preparation and measurement techniques (ellipsometry, RHEED) ▪ Absorption, transmission, spectroscopy, gas-sensors ▪ Intra-Cavity-Absorption-Spectroscopy, mode competition ▪ Photoluminescence, Scanning Electron Microscope, Tunneling Electron Microscope ▪ Atomic Force Microscope (AFM), cantilever based sensors ▪ Scanning near-field optical sensors, Magneto Resistive Effects.				
Literature	▪ W. Göpel, *Sensors – A Comprehensive Survey,* VCH, (1997) ▪ S.O. Kasap, *Optoelectronics and Photonics*, Prentice-Hall, (2001) ▪ B. Bhushan (Editor), *Springer Handbook of Nanotechnology*, Springer, (2004) ▪ J. W. Goodman: Fourier Optics; Roberts & Company Publishers; 3rd edition (2004) ▪ D. B. Murphy: Fundamentals of Light Microscopy and Electronic Imaging; John Wiley & Sons (2001) ▪ D. Malacara: Optical Shop Testing; Wiley-Interscience; 3rd edition (2007) ▪ P. Török, F.-J. Kao (Ed.): Optical Imaging and Microscopy; Springer-Verlag (2007)				
Media	Beamer (presentation), black board (derivations, explanations), electronic documents (seminar-reports), practical exercises, experiments (lab training).				
Objectives	▪ Overview on measurement techniques and operating principles ▪ Principals of optical sensors, scope of applications ▪ Learning about modern concepts of precision metrology ▪ Getting practical experience in optical measurement set-ups ▪ Establishing synergies between engineering disciplines and natural sciences ▪ Finding access to theses in the innovative field of optical technologies ▪ Introduction to the 21st century as the “century of photonics and nano technology”.				
Competences to be acquired	▪ Knowledge in modern measurement technologies used in current research and industrial applications ▪ Ability to estimate potentials and limitations of optical measurement techniques ▪ Experience in information gathering and presentation techniques of complex technical subjects

2.5 Mobile Internet

Module title	**Mobile Internet R1a**				
Courses	**Title**	**Type**	**SWS**	**Credits**	**Performance requirements/ Examination**
	Communication Technologies I (lec)	lecture	2	3	oral exam (30 minutes)
	Communication Technologies I (ex)	exercises	1	1	
	Communication Technologies I (lab)	lab training	1	2	lab training attendance and conductance of experiments, oral exam (30 minutes)
Module credits	6				
Language	English				
Held	in summer semester, annually				
Lecturer(s)	David, Kusber, Bolz				
Responsible(s)	David				
Required qualifications	▪ Knowledge of contents of the module *Mobile Internet Q1* or comparable knowledge and skills. ▪ Knowledge in programming, preferably in Java				
Workload	60 hours course attendance 120 hours self-study				
Contents	▪ Advanced and recent topics in the area of networks and applications (IPv6, QoS, Voice over IP, traffic theory, distributed systems) ▪ Firewalls, file/print/web server.				
Literature	▪ Kurose/Ross, *Computer Networks*, Addison Wesley, 2nd edition ▪ Douglas E. Comer, *Internetworking with TCP/IP*, Prentice Hall, 4th edition ▪ Dimitri Bertsekas, Robert Gallager, *Data networks*, Prentice Hall, 1992 ▪ Andrew S. Tanenbaum, *Computer Networks*, Prentice Hall, 1996, last edition ▪ Klaus David und Thorsten Benkner, *Digitale Mobilfunksysteme*, B.G. Teubner, 1996 (in German) ▪ Harri Holma und Antti Toskala, *WCDMA for UMTS*, Wiley, 2002.				
Media	Beamer (presentation), black board (derivations, explanations), paper (exercises), PC based software development (lab training).				
Objectives	Understanding internet applications, services and protocols.				
Competences to be acquired	▪ Research and development in the area of mobile internet ▪ Ability to design schemes for server based services in networks.

2.6 Optoelectronics

Module title	**Optoelectronics R1a**				
Courses	**Title**	**Type**	**SWS**	**Credits**	**Performance requirements/ Examination**
	Microsystem technology (lec)	lecture	2	3	oral exam (30 minutes)
	Technology of electronic and optoelectronic devices (lec)	lecture	2	3	oral exam (30 minutes)
Module credits	6				
Language	English				
Held	in summer semester, annually				
Lecturer(s)	Hillmer				
Responsible(s)	Hillmer				
Required qualifications	Basic knowledge on semiconductor devices (transistor, laser diode, LED, photo diode), material science and optics				
Workload	60 hours course attendance 120 hours self-study				
Contents	▪ Introduction to modern fabrication processes, technology of fibers, wave guides, lasers ▪ Crystal growth: semiconductor wafers, thin layer epitaxy ▪ Lithography: optical, X-ray, electron-beam, ion-beam, EUVL, nano imprint ▪ Plasma processing and vacuum technology ▪ Deposition techniques: evaporation, sputtering, plasma assisted techniques ▪ Dry and wet-chemical etching and clean room technology ▪ Fabrication technology of electronic devices (planar transistor, electronic integrated chips), optoelectronic devices (semiconductor lasers, gratings) and micro-opto-electro-mechanical systems (MOEMS) ▪ Introduction to micromachining, microsystem techniques, miniaturization, packaging and nanotechnology ▪ Reasons for miniaturization and integration, types of micromachining ▪ Sensors and actuators ▪ Large variety of MEMS and MOEMS examples: membranes, springs, resonator elements, cantilevers, valves, manipulation elements, gripping tools, light modulators, optical switches, beam splitters, projection displays, micro optical bench, data distribution, micromachined tunable filters and lasers, ▪ Displays: micromachined (micromirror) displays, laser display technology, vacuum-electronics ▪ Lab tour in the clean room.				
Literature	▪ R. Williams, *Modern GaAs Processing Methods*, Artech House Inc., ISBN 0-89006-343-5, 1990. ▪ W. Menz, J.Mohr and O. Paul, *Microsystem Technology*, VCH-Verlag, 2001. ▪ K. Iga, S. Kinoshita, *Process technology for semiconductor lasers*, Springer, Series in Material Science 30, 1996. ▪ B. Bhushan (Editor), *Springer Handbook of Nanotechnology*, Springer, 2004.				
Media	Beamer (presentation), black board (derivations, explanations), paper (exercises).				
Objectives	▪ Understanding the fundamentals in micromachining, micro-opto-electro-mechanical systems (MOEMS) and optical MOEMS ▪ Understanding the fundamentals of semiconductor technology including specific processes, schemes and required instrumentation ▪ Methodology, interdisciplinary aspects, future perspectives and market trends ▪ Finding solutions using interdisciplinary analogies ▪ Establishing synergies between engineering disciplines and natural sciences ▪ Introduction to the 21st century as the “century of photonics and nano technology”.				
Competences to be acquired	▪ Knowledge in micromachining, devices, thin layer and clean room technologies ▪ Methodology in specialized miniaturization schemes and integration of electronic and optoelectronic devices and systems ▪ Knowledge of design, fabrication and use of nanoelectronic, (opto-)electronic and micromachined devices				

Module title	Optoelectronics R2a				
Courses	**Title**	**Type**	**SWS**	**Credits**	**Performance requirements/ Examination**
	Semiconductor Lasers (lec)	lecture	2	4	oral exam (30 minutes)
	Semiconductor Lasers (ex)	exercises	1	2	
	Optoelectronics II (lab)	lab training	2	3	written report on measured data and presentation
	Seminar in Optoelectronics I+II (sem)	seminar	2	3	seminar attendance and presentation
Module credits	12				
Language	English				
Held	in winter semester, annually				
Lecturer(s)	Hillmer, Shrestha				
Responsible(s)	Hillmer				
Required qualifications	Basic knowledge on semiconductor devices, material science, optoelectronics				
Workload	105 hours course attendance 255 hours self-study				
Contents	▪ Diffractive elements: 1-, 2- and 3-dimensional gratings, Fresnel lenses and photonic crystals ▪ Lasers: gain, rate equations, DFB gratings, spectra, ultrafast lasers, tunable lasers, chirped gratings, microdisc lasers, quantum cascade lasers, DBR mirrors for vertical cavity lasers, VCSELs, blue semiconductor lasers ▪ Light processing: switches, splitters, amplifiers, combiners, multiplexers, demultiplexers, beam transformers ▪ Optical communication systems: WDM, TDM ▪ Experimental modules such as DFB laser diodes, sample stages, optical spectrum analyzers and PC will be assembled to measure laser spectra as a function of injection current and temperature ▪ Measured are: spectral shift of different modes of diode lasers with varying injection current and temperature, light power-versus-current characteristics, T_o. ▪ Evaluation, interpretation, documentation and presentation of the measured data. ▪ Advanced seminar topics in optoelectronics				
Literature	▪ J. Gowar, *Optical Communication Systems*, 2nd ed., Prentice Hall, 1993. ▪ K. Iga, S. Kinoshita, *Process technology for semiconductor lasers*, Springer, Series in Material Science 30, 1996. ▪ S.L. Chuang, *Physics of Optoelectronic Devices*, Wiley & Sons, New York, 1995. ▪ F. Träger (Editor), *Springer Handbook of Lasers and Optics*, Springer, 2007.				
Media	Beamer (presentation,seminar), black board (derivations, explanations), paper (exercises), measurement instrumentation (lab).				
Objectives	▪ To learn basic principles of optoelectronic devices and systems, structure and operating principles of optoelectronic components ▪ To learn the huge application potential of optoelectronic devices and photonic tools ▪ The engineer should learn to solve problems using interdisciplinary analogies. ▪ To understand the successful solutions of nature as a promising approach for an advanced working engineer. ▪ To learn presentation techniques and to obtain presentation practice. ▪ To learn to structure a talk to optimize the transfer of essentials to the audience. ▪ Introduction to scientific working. The engineer learns how to analyze measured data and how to compare experimental and theoretical results and inferences. ▪ To learn to efficiently apply different set-up components for optical characterization.				
Competences to be acquired	▪ Understanding the complex interaction of electronic, thermal and optical phenomena in laser diodes. ▪ Sustainable knowledge in operation and application of optoelectronic devices ▪ Research and development in the area of optoelectronic components				

Module title	Optoelectronics P1a				
Courses	**Title**	**Type**	**SWS**	**Credits**	**Performance requirements/ Examination**
	Optoelectronics Project Work	project	4	6	Report and presentation
Module credits	6				
Language	English				
Held	in summer and winter semesters, topics on demand anytime				
Lecturer(s)	Hillmer and team				
Responsible(s)	Hillmer				
Required qualifications	Profound knowledge in optoelectronics				
Workload	60 hours course attendance 120 hours self-study				
Contents	▪ Theoretical model calculation using advanced software tools on problems at the research front ▪ Example: calculation of laser spectra with the goal to optimize and design an advanced VCSEL with complex coupling (real and imaginary part in refractive index). This is done for a novel hybrid structure combining inorganic and organic materials ▪ Variation of basic parameters, like Δn, measurements and evaluation of different characteristics ▪ The simulations are defined according to general and actual problems in optoelectronics and are related to research topics of the working group.				
Literature	Scientific papers/books according to project topics.				
Media	Beamer (presentation of results), report (electronic form and hard copy).				
Objectives	▪ Practice in theoretical model calculations. The engineer should learn to understand basics and fundamental interaction of effects by a variation of geometric and material parameters. ▪ The student will learn how to design advanced photonic devices. ▪ Introduction to scientific work. The engineer learns how to analyze and to interpret calculated theoretical data. ▪ To structure the analyzed data and parameter series in such a way that the uninvolved reader can understand and follow the argumentation. ▪ Methodology of project organization and project management, team work.				
Competences to be acquired	▪ To create new or modify existing models according to the given problem. ▪ To analyze data series with respect to the given problem. ▪ To experience synergies in knowledge during the comparison and analysis of theoretical and experimental data. ▪ Introduction into appropriate scientific working.				

Module title	Optoelectronics T1a				
Courses	**Title**	**Type**	**SWS**	**Credits**	**Performance requirements/ Examination**
	Optoelectronics Master Thesis	master thesis	20	30	Report and presentation
Module credits	30				
Language	English				
Held	in summer and winter semesters, topics on demand anytime				
Lecturer(s)	Hillmer and team				
Responsible(s)	Hillmer				
Required qualifications	▪ Profound knowledge in optoelectronics ▪ Proof of fulfilled admission requirements for the Master thesis according to the ECE examination regulation				
Workload	300 hours course attendance 600 hours self-study				
Contents	▪ Independent scientific work on a problem in photonics and related areas like design, technological fabrication in the clean room, characterization of optoelectronic devices or systems, nanotechnology and micromachining ▪ The students are working on problems which have a pronounced application potential, partly in an consortium including industry. ▪ The students are encouraged to create spin-off companies based on their own work.				
Literature	Papers according to thesis topics.				
Media	PC based software development and/or hardware development, instruments for measurements and experiments, beamer (presentation of results), report (electronic form and hard copy).				
Objectives	▪ Creating models for a given problem ▪ To obtain practice in experimental work (technology or characterization) or theoretical model calculations ▪ Analyzing and interpreting of measured data ▪ Comparison of own results to actual literature ▪ Writing of a report and presentation of results in a colloquium ▪ Team work and efficient in projects.				
Competences to be acquired	▪ Experience in practical clean room technology ▪ Profound knowledge in theoretical model calculations ▪ Independent scientific work ▪ Compilation of a report, preparation of a talk and presentation of scientific results.				

2.7 Social Communication

<tr><td>Media</td><td colspan="5">Beamer and black board (explanations), internet based search (computer), paper (exercises), films, DVDs.</td></tr>
<tr><td>Objectives</td><td colspan="5">General topics:
▪ Social integration
▪ Knowing basic German language expressions up to level A2
▪ Using the language in everyday situations.
Objectives in terms of levels of the Common European Reference Framework (Gemeinsamer Europäischer Referenzrahmen, GERR):
A1 The student is able to
▪ understand usual expressions with immediate meaning (own person, family, shopping, working, schedule, displays, brochures, simple announcements, use of public transport)
▪ communicate in simple standard situations, enquire about and obtain information about familiar things and exchange information (looking for a way, accomodation, present activity, apologize if absent).
▪ understand and use familiar every-day expressions for satisfying concrete needs
▪ introduce herself/himself/others and ask questions about a person, e.g. about their living conditions, and answer corresponding questions
▪ communicate on a simple level, if the conversational partner speaks slowly and distinctly and assist in case of a misunderstanding.
A2 The student is able to
▪ speak about her/his person, the job, the environment and elementary needs on a basic level
▪ describe his living conditions and understand short simple messages
▪ write simple texts and letters, read and understand and have brief chats in German
▪ understand main topics of oral and written texts (in the context of familiar situations at work, administration, school, leisure and radio/TV reports on latest news,</td></tr>
</table>

	profession and interests).
Competences to be acquired	▪ Soft skills: learning and study techniques, learning experience and problem solving as well as inter-cultural competence, scientific language ▪ Elementary and independent use of German language ▪ Communication competence ▪ Inter-cultural competence ▪ Social competence.

2.8 Software Components for Communication Systems

</table>

3 Qualification modules

If a student does not fulfill the admission requirements for the ECE program, the examination board can grant a conditional admission according to §4 par.(5) of the ECE examination regulation. The condition requires that the student has to earn credits (totalling at most 24 credits) from the modules listed below prior to starting the master thesis.

As in Section 1, the modules cover the areas of

- Digital Communications
- Mobile Internet
- Microwaves
- Optoelectronics.

Within each area, we have the aforementioned naming convention <AREA TYPE NO> such as *Digital Communications Q1*, where, unlike in Section 1, TYPE takes the value **Q** for **q**ualification.

3.1 Digital Communications

Module title	**Digital Communications Q1a**				
Courses	**Title**	**Type**	**SWS**	**Credits**	**Performance requirements/ Examination**
	Introduction to Digital Communications (lec)	lecture	3	5	oral exam (30 minutes)
	Introduction to Digital Communications (ex)	exercises	1	1	
Module credits	6				
Language	English				
Held	in summer and winter semesters				
Lecturer(s)	Dahlhaus				
Responsible(s)	Dahlhaus				
Required qualifications	Knowledge of fundamentals in communications				
Workload	60 hours course attendance 120 hours self-study				
Contents	▪ Introduction, mathematical models for communication channels, linear systems, basics of probability and random variables, the central limit theorem, Fourier transforms, Shannon-Kotelnikov (sampling) theorem, stochastic processes, stationary processes and linear time-invariant systems, complex baseband representation of bandpass signals, orthogonal expansions of signals, linear digital modulation schemes, optimum receivers for the additive white Gaussian noise channel.				
Literature	▪ J.G. Proakis, *Digital Communications*, McGraw-Hill, 4th ed., ISBN 0-07-118183-0. ▪ Papoulis, S. U. Pillai, *Probability, Random Variables, and Stochastic Processes*, McGraw-Hill, 4th ed., ISBN 0071226613				
Media	Beamer (presentation), black board (derivations, explanations), paper (exercises).				
Objectives	▪ Understanding fundamentals in digital communications and statistical signal processing				
Competences to be acquired	▪ Development in the area of digital transmission systems ▪ Design of hardware and software components in digital transmission systems ▪ Assessment of analog front-ends.				

3.2 Mobile Internet

<table>
<tr><td>Module title</td><td colspan="5">Mobile Internet Q1a</td></tr>
<tr><td rowspan="4">Courses</td><td>Title</td><td>Type</td><td>SWS</td><td>Credits</td><td>Performance requirements/ Examination</td></tr>
<tr><td>Mobile Computing (lec)</td><td>lecture</td><td>2</td><td>3</td><td rowspan="2">written exam (2 hours)</td></tr>
<tr><td>Mobile Computing (ex)</td><td>exercises</td><td>1</td><td>1</td></tr>
<tr><td>Introduction to Communication II (lab)</td><td>lab training</td><td>1</td><td>2</td><td>lab training attendance and conductance of experiments,
oral exam (30 mins)</td></tr>
<tr><td>Module credits</td><td colspan="5">6</td></tr>
<tr><td>Language</td><td colspan="5">English</td></tr>
<tr><td>Held</td><td colspan="5">in summer semester, annually</td></tr>
<tr><td>Lecturer(s)</td><td colspan="5">David, Pirali, Bolz</td></tr>
<tr><td>Responsible(s)</td><td colspan="5">David</td></tr>
<tr><td>Required qualifications</td><td colspan="5">Knowledge of fundamentals in communications</td></tr>
<tr><td>Workload</td><td colspan="5">60 hours course attendance
120 hours self-study</td></tr>
<tr><td>Contents</td><td colspan="5">▪ Mobile communication: theoretical basics, present systems and applications (mobile radio channel, GSM services, GSM system, UMTS, WAP)
▪ Other services like MMS, pervasive computing and ubiquitous systems including practical experiments with real products
▪ Measurements of mobile radio channels.</td></tr>
<tr><td>Literature</td><td colspan="5">▪ Kurose/Ross, Computer Networks, Addison Wesley, 2nd edition
▪ Douglas E. Comer, Internetworking with TCP/IP, Prentice Hall, 4th edition
▪ Dimitri Bertsekas, Robert Gallager, Data networks, Prentice Hall, 1992
▪ Andrew S. Tanenbaum, Computer Networks, Prentice Hall, 1996, last edition
▪ Klaus David und Thorsten Benkner, Digitale Mobilfunksysteme, B.G. Teubner, 1996 (in German)
▪ Harri Holma und Antti Toskala, WCDMA for UMTS, Wiley, 2002.</td></tr>
<tr><td>Media</td><td colspan="5">Beamer (presentation), black board (derivations, explanations), paper (exercises), PC based software development (lab training).</td></tr>
<tr><td>Objectives</td><td colspan="5">▪ Understanding the mobile radio channel, mobile radio systems and services
▪ Understanding the interaction of individual components in mobile radio systems.</td></tr>
<tr><td>Competences to be acquired</td><td colspan="5">▪ Research and development in the area of mobile internet
▪ Ability to use mobile radio measurement equipment.</td></tr>
</table>

3.3 Microwaves

<table>
<tr><td>Module title</td><td colspan="5">Microwaves Q1a</td></tr>
<tr><td rowspan="4">Courses</td><td>Title</td><td>Type</td><td>SWS</td><td>Credits</td><td>Performance requirements/ Examination</td></tr>
<tr><td>Microwave Integrated Circuits I (lec)</td><td>lecture</td><td>2</td><td>3</td><td rowspan="2">written exam (2 hours)</td></tr>
<tr><td>Microwave Integrated Circuits I (ex)</td><td>exercises</td><td>1</td><td>1</td></tr>
<tr><td>Microwave Integrated Circuits I (lab)</td><td>lab training</td><td>2</td><td>2</td><td>lab training attendance and conductance of experiments</td></tr>
<tr><td>Module credits</td><td colspan="5">6</td></tr>
<tr><td>Language</td><td colspan="5">English</td></tr>
<tr><td>Held</td><td colspan="5">in winter semester, annually</td></tr>
<tr><td>Lecturer(s)</td><td colspan="5">Bangert, Chatim</td></tr>
<tr><td>Responsible(s)</td><td colspan="5">Bangert</td></tr>
<tr><td>Required qualifications</td><td colspan="5">▪ Knowledge of fundamentals of high frequency technology
▪ Knowledge of vector algebra and vector analysis.</td></tr>
<tr><td>Workload</td><td colspan="5">75 hours course attendance
105 hours self-study</td></tr>
<tr><td>Contents</td><td colspan="5">▪ Methods for designing networks
▪ Survey of striplines
▪ Methods of micro-strip analysis
▪ Dispersion in micro-striplines, dispersion measurements
▪ Planar wave guide models
▪ Micro-strip discontinuities and losses, technology
▪ Introduction to Agilent Advanced Design System (ADS), harmonic analysis, simulation of S-parameters in microwave networks, micro-strip resonators and discontinuties.</td></tr>
<tr><td>Literature</td><td colspan="5">▪ G. Kompa, Practical Microstrip Design and Applications, Artech House, 2006
▪ H. Brand, Schaltungslehre linearer Mikrowellennetze, S. Hirzel Verlag, 1970 (in German)
▪ Notes on lab training.</td></tr>
<tr><td>Media</td><td colspan="5">Beamer (presentation), black board (derivations, explanations), paper (exercises), experiments (lab training).</td></tr>
<tr><td>Objectives</td><td colspan="5">▪ Understanding schemes for computer-aided design of integrated microwave and millimeter wave circuits
▪ Ability to model the electrical properties of planas lines, line discontinuities and branchings in integrated circuits
▪ Ability to design integrated circuits
▪ Ability to apply commercial design software and to simulate linear and non-linear microwave circuits.</td></tr>
<tr><td>Competences to be acquired</td><td colspan="5">▪ Research and development in the area of microwave components
▪ Characterization and modeling of microwave components based on measurements
▪ Design of microwave networks.</td></tr>

<tr><td>Module credits</td><td colspan="5">6</td></tr>
<tr><td>Language</td><td colspan="5">English</td></tr>
<tr><td>Held</td><td colspan="5">in winter semester, annually</td></tr>
<tr><td>Lecturer(s)</td><td colspan="5">Hillmer, Memon</td></tr>
<tr><td>Responsible(s)</td><td colspan="5">Hillmer</td></tr>
<tr><td>Required qualifications</td><td colspan="5">Basic knowledge on electronic semiconductor devices (diodes, transistor), material science</td></tr>
<tr><td>Workload</td><td colspan="5">60 hours course attendance
120 hours self-study</td></tr>
<tr><td>Contents</td><td colspan="5">▪ Introduction into ray- and quantum optics
▪ Refractive index, polarization, interference, diffraction, coherence
▪ Material properties of glass: dispersion, absorption
▪ Optical waveguiding, detailed introduction into dispersion and absorption
▪ Interferometers (Michelson, Fabry-Pérot, Mach-Zehnder)
▪ Optical multilayer structures (e.g. DBR mirrors)
▪ Introduction to lasers, LEDs, photo diodes and solar cells
▪ Simulation of active and passive optical devices (e.g. Fabry-Pérot interferometers, VCSELs)</td></tr>
<tr><td>Literature</td><td colspan="5">▪ J. Gowar, Optical Communication Systems, 2nd ed., Prentice Hall, 1993.
▪ K. Iga, S. Kinoshita, Process technology for semiconductor lasers, Springer, Series in Material Science 30, 1996.
▪ S.L. Chuang, Physics of Optoelectronic Devices, John Wiley & Sons, New York, 1995.
▪ F. Träger (Editor), Springer Handbook of Lasers and Optics, Springer, 2007.</td></tr>
<tr><td>Media</td><td colspan="5">Beamer (presentation), black board (derivations, explanations), paper (exercises).</td></tr>
<tr><td>Objectives</td><td colspan="5">▪ To learn basic principles of optoelectronic devices and systems, structure and operating principles of optoelectronic components
▪ To learn the huge application potential of optoelectronic devices and photonic tools
▪ The engineer should learn to solve problems using interdisciplinary analogies.
▪ To understand the successful solutions of nature as a promising approach for an advanced working engineer.
▪ Introduction to scientific working. The engineer learns how to interprete data from model calculations and how to compare experimental and theoretical results and to conclude methodology</td></tr>
<tr><td>Competences to be acquired</td><td colspan="5">▪ Understanding the complex interaction of electronic, thermal and optical phenomena in laser diodes.
▪ Sustainable knowledge in operation and application of optoelectronic devices
▪ Research and development in the area of optoelectronic components</td></tr>
</table>
