

# Introduction to the Master Programme *Mathematics*

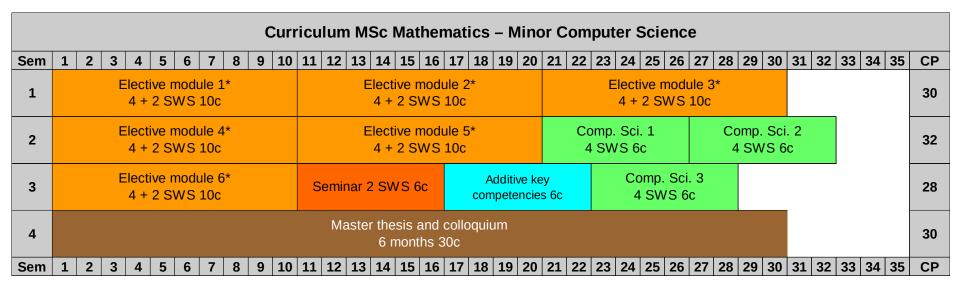

Torsten Mütze

## **General Structure of the Programme**

- Much freedom in choice of courses: there are no compulsory, but only elective courses!
- Mainly lecture courses, but also one seminar.
- Each semester, different master courses are taught. Offer depends on availability of lecturers and demand by students. Available courses can always be found on eCampus (https://portal.uni-kassel.de/, not very comfortable).
- Courses for current semester: see later!
- Application minor compulsory (details later)
- 6 credits in additive key competencies required.
- In the last semester, 6 months **research thesis** must be written (under the supervision of a professor). Topic usually builds on previously attended lecture course(s) or seminar.
- Read the examination regulations! https://www.uni-kassel.de/uni/studium/mathematics-master/examination-regulations

## One Possible Curriculum (here shown for minor in computer science)

<sup>\*</sup> The six elective modules must cover at least three of the five fields *Analysis*, *Algebra*, *Discrete Mathematics*, *Numerics* and *Stochastic*.

Such curricula are only **recommendations**! You are free to choose **any other** distribution of your modules over the semester. *From our side*, it is also no problem, if you need **more than four semesters**.

## **Another Possible Curriculum** (here shown for minor economics)

Curriculum MSc Mathematics – Minor Economics																																											
Sem	1 2 3 4 5 6 7 8 9 10								11	12	13	3 14	4 1	5	16	17	18	19	20	2	1	22	23	24	Į 2!	5 2	26	27	28	29	30	31	32	33	34	35	СР						
1	Elective module 1* 4 + 2 SWS 10c						Elective module 2* 4 + 2 SWS 10c								Economics 1 4 SWS 6c							Additive key competencies 3c									29												
2	Elective module 3* 4 + 2 SWS 10c					Elective module 4* 4 + 2 SWS 10c									Seminar 2 SWS 6c						Economic 4 SWS				_					32													
3	Elective module 5* 4 + 2 SWS 10c								Elective module 6* 4 + 2 SWS 10c									Economics 3 4 SWS 6c							tive ke tencie:								29										
4	Master thesis and colloquium 6 months 30c																			30																							
Sem		1	2	3	3	4	5	5	6	7	8	3	9	10	11	12	13	3 14	4 1	5	16	17	18	19	20	2	1	22	23	24	Į 2!	5 2	26	27	28	29	30	31	32	33	34	35	СР

<sup>\*</sup> The six elective modules must cover at least three of the five fields *Analysis*, *Algebra*, *Discrete Mathematics*, *Numerics* and *Stochastic*.

Elective module Seminar Thesis	Appli- cation	Add. key competencies	
--------------------------------	------------------	-----------------------	--

## **Typical Structure of Lecture Courses**

- Master courses have typically the format 4+2: each week, there are four hours lectures
  (two blocks à 90min) taught by the lecturer and two hours tutorials (one block à 90min)
  taught by a teaching assistant (usually a Ph.D. student).
- The lectures start in the first week of the lecture period; the tutorials in the second week.
- Every week an **exercise sheet** is handed out which must be **solved** and **returned to the teaching assistant**. Only if you achieve **sufficiently many points**, you are admitted to the **final exam** of the course.
- The tutorials are also the place to ask questions in case of problems with the materials of the lecture course. Use it!
- Most courses are accompanied by a **Moodle course**; details and other organisatorial information are provided in the first lecture. Thus: *please attend the first lecture!*
- Remote students should contact the lecturers of their courses in advance and inform them about their participation.

#### **How to Enrol into a Course?**

- Simply go there for the first lecture! (The eCampus offers sometimes strange buttons for registration/enrolment whatever in mathematics, we do **not** use these).
- Before the end of the semester, you must first register for the so-called *non-graded learning assignments* (German: Studienleistung). If you have achieved enough points on the exercise sheets, the teaching assistent will then mark in the system that you have passed. After that you must register for the exam (German: Prüfungsleistung). You cannot do this before you got the non-graded learning assignment.

**Note:** no lecturer is allowed to examine you, if you are not registered for the exam!

- In case of **problems**: speak with your lecturer and/or contact the **examination office** (German: Prüfungsbüro).
- Special case: seminars. There is usually a preliminary meeting where the topics are distributed among the participants.

#### **Lecture Courses and Seminars this Summer Term**

See <a href="https://portal.uni-kassel.de/qisserver/rds?state=wsearchv&search=1&subdir=veranstaltung&k abstgv.abstgvnr=3071&veranstaltung.semester=20242& form=display&veranstaltung.semester=20242& abstgv.abstgvnr=3071&P start=0&P anzahl=100&P.vx=kurz</a>

#### **Standard 4+2 Courses**

- Functional Analysis (Analysis, Wed 9-11, Thu 9-11, Kinderknecht)
- Computer Algebra II (Algebra, Tue 15-17, Wed 11-13, Regensburger)
- Discrete Mathematics II (Discrete Mathematics, Tue 13-15, Thu 9-11, Mütze+Rieck)
- Optimisation I (Discrete Mathematics, Mon 15-17, Tue 15-17, Bley)
- Finite Element Methods (Numerics, Mon 11-13, Wed 11-13, Friedmann)
- Numerical Methods for Ordinary Differential Equations (Numerics, Mon 13-15, Tue 13-15, Izgin)
- Measure and Probability Theory (Stochastics, Mon 9-11, Fr 11-13, Cioica-Licht)
- Stochastic Differential Equations (Stochastics, Tue 11-13, Wed 11-13, Antoni)

#### **Lecture Courses and Seminars this Summer Term**

https://portal.uni-kassel.de/qisserver/rds?state=wsearchv&search=1&subdir=veranstaltung&k\_abstgv.abstgvnr=3071&veranstaltung.semester=20242&\_form=display&veranstaltung.semester=20242&k\_abstgv.abstgvnr=3071&P\_start=0&P\_anzahl=100&P.vx=kurz

**Non-standard 2+1 Course** (continuation of the course Cryptography from previous term to make it a 4+2 course)

• Coding Theory (Algebra, Mon 9-11, Petersen)

#### **Seminar**

- Mathematical Modeling (Tue 9-11, Friedmann)
- Stochastics (Wed 11-13, Lindner)

## **Application Minor**

- You need 18 credits in a second subject, the application minor.
- Four possible choices:
  - O Computer science (different department on campus Wilhelmshöher Allee)
  - O Economics (different department on campus Holländischer Platz)
  - O Physics
  - O Nanosciences

(German speaking students may also choose some engineering programmes.)

- Note: you have to attend master courses in your application minor which typically assume knowledge from some bachelor courses!
- Think **early** about your application minor and inquire about **required prerequisites**! Get some counselling on your options!

## **Additive Key Competencies**

- Usually, no big choice available.
- Courses offered from all departments centralised list for whole university. See the Vorlesungsverzeichnis https://portal.uni-kassel.de/qisserver/rds? state=wtree&search=1&trex=step&root120221=200077%7C200678&P.vx=kurz
- Our recommendation: choose some **language courses** (English, German, ...) offered by **language center** of university.

## **General Advice for Successfully Studying Mathematics in Kassel**

- We are a **small institute** not many students, not many professors with a "family atmosphere". Try to become **part of the family**: get into contact with your fellow students, but in case of problems/questions also with your **lecturers** (either after a lecture or arrange an appointment via e-mail).
- As a **non-German speaking student** contact your lecturers **before the course starts** and inform them about your participation. This ensures that the course will be taught in **English**!
- Opposed to many other countries, German bachelor programmes include already a lot of abstract mathematics and proofs play a much bigger role than computations. Our master programme assumes familiarity with this material! We are in the process of building an OpenMoodle course called *Bridging the Gap: Mathematics* to help you to learning: <a href="https://openmoodle.uni-kassel.de/course/view.php?id=372">https://openmoodle.uni-kassel.de/course/view.php?id=372</a>
   Analogous courses exist for Physics and Nanosciences (they are already more complete than the Maths course).

## Where to Get Help?

There are many places where you can get help for various problems:

- Mathematical problems: fellow students, teaching assistents, lecturers
- Administrative problems: students office (department, university), examinations office (department)

https://www.uni-kassel.de/fb10/institute/mathematik/studium-und-lehre/studienberatung-aminstitut

https://www.uni-kassel.de/fb10/en/organization/exam-office-german https://www.uni-kassel.de/uni/studium/mathematics-master/contact-and-examination-office

• **Problems as foreign student**: International Office https://www.uni-kassel.de/uni/international/kontakt-und-service/international-office

The **Fachschaft** (student body of the institute) is also quite helpful: https://www.uni-kassel.de/fb10/organisation/fachschaft
